

Series 20.03 - 3 groups

Constant, perfect espresso taste. The Series 20.03 brings about a revolution in the world of the traditional espresso coffee machines.

An overview of the convincing advantages:

- absolute temperature stability through the Temperature Control System (DTCS)
- utmost flexibility through independently operated brewing units
- each brewing unit and the water boiler can be turned on and off separately
- the temperature of each brewing unit and the water boiler can be separately regulated
- espresso quality independent of time and place thanks to a special Online Control System (OCS) (optional)
- programming of all parameters through an external palm-pad
- automatic control of all possible problems, which can be identified and dealt-with
- automatic interaction between the machine and the grinder by means of the Grind Control System (GCS) (optional)
- low service and maintenance costs
- 30% energy savings with respect to "comparable" machines
- automatic boiler cleaning
- 2 hot water doses programmed by a timer
- motor-pump mounted on a sound absorbing damper
- 2 manometers to control the pressure for the water boiler and the hot water system
- connection for the cash register is available

Special Feature "Evolution"

- double system for programming the water dosage for coffee and tea (manual Start/Stop in the "Classic")

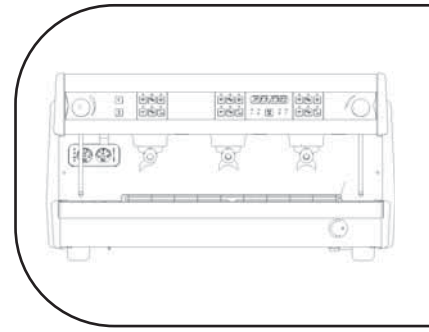

Technical specifications:

Dimensions in mm: 1.940 x d.525 x h.530

Thermal output: max. 4,8 kW

Connected load: 400 Volt 3N

Weight: 83 kg

side color

metallic
